

HEIC -> JPG Converter

Session summary | 2026-06-27 22:03

GOAL

Deploy the HEIC-to-JPG Streamlit converter on Hugging Face Spaces, auto-synced from GitHub. Eliminate Streamlit Cloud's injected branding overlays.

REPO & HOSTING

- GitHub: NoorJ29/heic-jpg (branch: main)
- HF Space: huggingface.co/spaces/noorj29/heic-jpg (Docker SDK)
- Auto-sync via GitHub Action (.github/workflows/sync-to-hf.yml)
- HF_TOKEN stored as GitHub repo secret
- Streamlit (app.py main entry)
- pillow-heif for HEIC decode / Pillow for JPEG encode
- Docker SDK on HF Space (Streamlit SDK removed by HF)
- requirements.txt with pinned versions

C:\Users\jumoo\trial\heic-renamer\app.py

C:\Users\jumoo\trial\heic-renamer\heic_engine.py

C:\Users\jumoo\trial\heic-renamer\Dockerfile

C:\Users\jumoo\trial\heic-renamer\README.md

C:\Users\jumoo\trial\heic-renamer\requirements.txt

C:\Users\jumoo\trial\heic-renamer\.github\workflows\sync-to-hf.yml

UI / DESIGN (app.py)

- Full dark theme: #0b0e14 background, Inter font
- Gradient header text (blue to purple)
- Top-right chrome (Deploy/Share/Toolbar) hidden via CSS
- Top-left #MainMenu sidebar toggle KEPT visible
- Footer gone (HF has no footer; no longer on Streamlit Cloud)
- 3 preset buttons: Lossless (Q100), High (Q95), Standard (Q80)
- Fine-tune slider synced with presets via session_state.quality_target
- Color-coded visual quality bar (green/blue/yellow/red)
- Smart caption about expected file size vs quality tradeoff
- History section: last 10 sessions + Undo Last / Clear buttons
- Custom HTML button with onclick did NOT work (Streamlit CSP strips inline JS)
- SOLUTION: repositioned native [data-testid='stSidebarCollapsedButton'] via pure CSS
- Repositioned to bottom: 1rem, left: 1rem, with dark theme styling and hover effects
- No JavaScript required for the toggle - it's the native Streamlit element

st.session_state.quality_target (int 1-100, synced with quality slider)

APP FLOW

- Open page -> see header, sidebar (collapsed by default), file upload zone
- Toggle sidebar via bottom-left button -> adjust quality presets/slider
- Drop HEIC files -> progress per file -> download individually or Download All as ZIP
- Size comparison (original vs converted) + savings % displayed per file
- Each conversion logged to ~/.heic-renamer_history.json

- GitHub Action failed exit code 128 -> 1 (branch sync issues)
- Fixed: HEAD:main with fallback to HEAD:master, added set -x for verbose output
- Node.js 20 deprecation warning in Actions (harmless, not the cause)
- Custom HTML button onclick stripped by Streamlit CSP -> switched to CSS repositioning

- Verify app at <https://noorj29-heic-jpg.hf.space> after each push (wait ~1 min for rebuild)
- HF Space name: heic-jpg (not heic-jpg-converter)
- All changes: push to GitHub main triggers auto-sync to HF Space
- Streamlit Cloud version is deprecated in favor of HF Spaces
- Working directory: C:\Users\jumool\trial\heic-renamer\
